Lecture 13 Exercise: Movie Shop Black Box Testing—Test Cases and Test Values

In the movie sales and rental shop system, there is a procedure, `validateRating`, that validates the review rating input by the user. A review rating is an integer value from 1 to 5.

For each of the test categories below, what test cases and specific test values should be used to test whether the `validateRating` procedure works correctly and accepts only valid rating values?

(a) boundary test cases and values

(b) typical test cases and values

(c) other test cases and values
